## Education

### University of Massachusetts Chan Medical School

Worcester, MA

M.D. CANDIDATE

Aug. 2022 - Present

### Brown University

Providence, RI

B.S. IN COMPUTATIONAL BIOLOGY

Sep. 2017 - May 2021

- Honors Thesis Title: "coiaf: Complexity Of Infection Estimation with Allele Frequencies"
- Magna Cum Laude
- GPA 4.0

### Boston University

Boston, MA

TOOK CLASSES WHILE IN HIGH SCHOOL

Sep. 2015 - May 2021

- GPA 3.98

## Research Experience

### Brown University

Providence, RI

BIOINFORMATICIAN

June 2021 - August 2022

- Developer for coiaf, a package to estimate the number of malarial strains a patient is infected with, known as the Complexity of Infection (COI).
- Developer for MIPTools, a suite of computational tools used for molecular inversion probe design, data processing, and analysis.
- Developer for mipicorn, a unified framework for molecular inversion probe (MIP) and amplicon-targeted sequencing analysis after micro haplotyping or variant calling. It provides tools for parsing large variant files, filtering and manipulating the data, and basic analyses and visualization.

LAB MEMBER

January 2020 - August 2022

- Developer for coiaf, a package to estimate the number of malarial strains a patient is infected with, known as the Complexity of Infection (COI).

### Massachusetts General Hospital (MGH)

Boston, MA

RESEARCH INTERN

May 2019 - September 2020

- Worked at the Orthopedic Trauma Department, shadowing doctors and conducting research primarily with Dr. Heng.
- Focused on examining associations between mental health scores and physical function scores of patients who had recently undergone total knee or hip replacements.

SUMMER FELLOW

May 2019 - December 2019

- Worked at the cardiovascular research center under the direction of Dr. Das, Dr. Varrias, and Dr. Rodosthenous.
- Worked on examining associations between micro RNAs, long non coding RNAs, and heart failure.

### Brown University

Providence, RI

RESEARCH INTERN

May 2018 - January 2019

- Worked with Prof. Schmid at the Center for Evidence Based Synthesis.
- Created a package to analyze n-of-1 clinical trials. The package allows users to run normal, binomial, poisson, or ordinal regressions on the data.

### Massachusetts Institute of Technology

Cambridge, MA

RESEARCH INTERN

June 2016 - September 2016

- Intern at the MIT Operations Research Center.
- Worked with Dr. Bertsimas and Dr. Dunn on regression and classification problems using an approach that derives optimal decision trees by solving an integer optimization problem.

RESEARCH INTERN

June 2015 - September 2015

- Intern at the MIT Operations Research Center.
- Worked with Dr. Dimitris Bertsimas on a regression problem with an application to ophthalmology.

## Software Projects

### MIPTools

October 2021 - Present

A suite of computational tools used for molecular inversion probe design, data processing, and analysis.

### mipicorn

August 2021 - Present

A unified analysis framework for molecular inversion probe (MIP) and amplicon-targeted sequencing analysis after micro haplotyping or variant calling. It provides tools for parsing large variant files, filtering and manipulating the data, and basic analyses and visualization.

Methods for estimating complexity of infection using easily calculated measures from sequence read depth data.

## nof1gen

December 2018 - March 2019

A package for running analyses for N of 1 study trials.

## CAvaccines

March 2020 - October 2021

A package to examine associations between vaccination rates and disease incidence in California counties.

## Selected Honors & Awards

---

2021 **Magna Cum Laude**, Brown University

2021 **Honors**, Computational Biology, Brown University

2019 **Fellowship**, American Heart Association Undergraduate Student Summer Fellowship Award
